

DOUBLE GATE

Double Gate Construction:

Our gates feature a diagonal compression brace to prevent sagging over time. The 2x4 latch, secured with black brackets, distributes pressure more effectively than smaller latches, especially in strong winds. We use 4x6 or 6x6 posts for durability, as 4x4 posts lack the strength to support the gate's weight. Gates typically open toward the street or back alley to allow closure after a vehicle is parked. Spring-loaded wheels at the bottom provide support when closed but may not touch the ground when the gate is open.

Heights: 6'

Post Sizes: 4x6, 6x6 (4x4 isn't available)

Gate Width: 8ft-14ft wide

Design: Gate frame is 2x4, Latch and Hinge hardware is black. Black wheels at the bottom of both gate corners. Latch is a long 2x4 set horizontally in brackets to hold gate from opening.

Material: Pressure Treated Brown (From Spray Laked Saw Mill), Cedar (Posts will be pressure treated due to cedar posts being brittle)
